- 2) The main problem is evaluating the clarity of the lectures and the difficulty in providing actionable insights that lecturers can use to improve the learning experience of students.

d. We are interested in this topic because we believe that the more information we collect about the challenges students face in a lecture, the greater the propensity of the teachers to make actionable decisions that will cause positive impact in the experiences of the students.

e. The teachers, the lecturers, the university, education committee

Enhancing learner-centered feedback with AI: teachers' practices and perceptions

Authors: Aldino, A. A., Tsai, Y.-S., Mello, R. F., Gašević, D., & Chen, G.

Title: Enhancing learner-centered feedback with AI: teachers' practices and perceptions

Journal: Assessment & Evaluation in Higher Education

DOI: <https://doi.org/10.1080/02602938.2026.2638920>

Type: Original Research Article

Relevance:

This article directly builds on the findings of the target paper (Aldino et al., 2024)

by exploring how teachers perceive and adopt AI tools for feedback analysis. It validates the practical utility of the ML models proposed in the original study, showing that while teachers recognize the value of AI in identifying missing feedback components, they remain cautious about over-reliance. It highlights the need for human-in-the-loop systems where AI supports rather than replaces educator judgment.

Utilizing artificial intelligence for assessment in higher education

Authors: Aldreabi, et al. (2025)

Title: Utilizing artificial intelligence for assessment in higher education

Journal: ERIC (Education Resources Information Center)

DOI: Not provided (likely a preprint or report)

Type: Systematic Literature Review

Relevance:

This review synthesizes existing research on AI in assessment and feedback, including the target paper's contributions. It confirms that AI-driven feedback mechanisms significantly improve personalization and efficiency, but also highlights ethical and implementation challenges. It serves as a meta-analysis that contextualizes the target paper within the broader field.

The Impact of Digital Technology Use on Teaching Quality in University Physical Education: An interpretable machine learning approach

Authors: Liguozhang, Zetan Liu, Liangyu Zhao, Jiarui Gao

Journal: Applied Sciences

DOI: <https://doi.org/10.3390/app15147689>

Type: Original Research Article

Year: July 2025

Relevance:

In this article we can see how machine learning can improve the quality of the teaching through digital technology use. It shows the application of interpretable ML models that evaluate the impact of digital tools on education. The findings of the study showed that digital technologies are directly affecting the quality of the teaching.
